Released by:
[redacted]

As required by Government Code, Section 27491, an inquiry was made into the death of David CHAVEZ. Based on the circumstances of the scene and/or medical history review a post-mortem examination was necessary to determine the cause of death.

The medical cause of death was: [redacted]

Other significant findings were: [redacted]

Based on the findings of our investigation, including the determination of the cause of death determined by our forensic pathologist, the manner of death has been determined to be:

☒ Homicide ☐ Suicide ☐ Natural ☐ Accidental ☐ Undetermined

Please accept my deepest sympathy to you in the recent loss of your brother.

Enclosed is a pamphlet describing a grief counseling service. You might find it helpful to contact them for help with understanding your feelings at this difficult time.

If you would like to request a copy of the complete Coroner's Report, please send your request to coroner@marinsheriff.org

If there is any way that our office can be of further assistance, please call 415-473-6043.

Respectfully,

Roger Fielding
Chief Deputy Coroner

RF/JC

CONTROL OF REMAINS: Unless other directions have been given by the decedent, the right and duty to control the disposition of the remains of the decedent, the location and conditions of interment, and arraignments and payments for funeral goods and services, rests with the following persons in the order named:

1. An agent under a power of attorney for health care who has the right and duty of disposition under the Probate Code, Division 4.7 (commencing with 4600).
2. The competent surviving spouse.
3. The sole surviving competent adult child of the decedent, or if there is more than one, the majority of the surviving competent adult children.
4. The surviving competent parent or parents of the decedent.
5. The sole surviving competent adult sibling of the decedent, or if there is more than one, the majority of the surviving competent adult siblings.
6. The surviving competent adult person or persons respectively in the next degree of kinship, or if there is more than one, the majority of those persons.
7. The public administrator when the deceased has sufficient assets.

These and other relevant provisions are found in Health & Safety Code 7100. If you would like a complete copy of this code section, please let Coroner Division staff know.

JEWELRY

Coroner Investigation

10/25/2022

MEDICAL HISTORY / SUMMARY / RX:

36-year-old male armed with a hammer, a tiller, and a large rock sustained multiple gunshot wounds during an encounter with law enforcement after he failed to comply with lawfully provided commands. The subject was pronounced deceased on scene at 1029 hours.

HX: None reported

RX: None reported

REPORTING PARTY INITIAL STATEMENT:

On Friday, July 29, 2022, at approximately 1603 hours, Sonoma County Sheriff's Office (SCSO) Sergeant Haugen contacted Marin County Sheriff's Office (MCSO) Coroner Division Chief Deputy Coroner Roger Fielding to report an officer involved shooting had occurred involving an SCSO Deputy during which the individual involved had sustained several gunshot wounds after an interaction with law enforcement in a remote, rural area in Healdsburg.

CONTROLLED DOCUMENT
Duplication or Reissuance Prohibited by Law
10/19/2022
Released by:
Marin County Sheriff's Office
Coroner Division

Due to the aforementioned circumstances involving SCSO Deputies, Sergeant Haugen was requesting the MCSO Coroner Division assume jurisdiction and complete the death investigation to maintain transparency and non-bias.

Chief Deputy Coroner R. Fielding advised Sergeant Haugen the MCSO Coroner Division would accept jurisdiction as requested and I would be responding to the scene in Healdsburg to complete a death investigation. Chief Deputy Coroner R. Fielding then notified the MCSO Communications Center of the aforementioned information.

DEATH / INJURY SCENE INVESTIGATION:

On 7/29/22, at approximately 1734 hours, I arrived at the SCSO Coroner Division office where Sgt. Haugen provided me with a verbal summary as well as the Computer-aided Dispatch (CAD) log for the event. I took noted as Sgt. Haugen explained the situation and learned the following for his conversation as well as the CAD log in summary:

On 7/29/22, at 0730 hours, a suspicious circumstance was reported at [redacted] Highway 128 in Healdsburg during which it was reported a silver Nissan Sentra had pulled over and an adult male exited the vehicle and ran into the brush. At 0822 hours, in the approximate area of [redacted] Trey Monte Lane, Healdsburg, CA, it was reported that the unidentified male threw a rock through the window of the reporting party's house. At 0841 hours, the subject reportedly stole the gardener's truck, a blue Chevy Silverado, and headed towards [redacted] Trey Monte Lane. At 0846 hours, the subject and the vehicle were noted to be at [redacted] Trey Monte Lane where the property owner reported the subject arrived and was on his knees asking for something in Spanish. It was later noted the subject was begging for the reporting party to kill him and had three large rocks in his hands. At 0850 hours, the subject ran down the side of a hill. The subject was described as a Hispanic male adult with grey pants, blue long-sleeve shirt, barefoot, and armed with several rocks. The subject ran west down a hill in the approximate area of [redacted] Trey Monte Lane. Sonoma County Sheriff's Office (SCSO) Deputies pursued the subject using various means of transportation including borrowed side-by-side off road vehicles and other All-Terrain Vehicles (ATVs). At 0945 hours, the subject was seen with a hammer, a tiller, and a large rock in his hands. He was given commands to place these items down. At 1001 hours, two units contacted the subject with what was described as a hammer and a tiller in his hands and a large rock in the other. The subject was given commands to put these items down. At some time not documented on the CAD, a taser was deployed. At 1003 hours, shots were fired at the subject by one of the SCSO Deputies. At 1018 hours, the subject was described as having no pulse and CPR was discontinued. It was not listed in the CAD when CPR was initiated; however, it was reported to have been initiated by SCSO deputies soon after the firearm was discharged. At 1029 hours, the subject was pronounced deceased by Bells Ambulance Paramedic Eric Constantine. Santa Rosa Police Department were already at the scene and

would be conducting the criminal investigation for SCSO.

At approximately 1755 hours, I followed an SCSO Coroner Deputy to [redacted] Thomas Road in Healdsburg. I was informed the scene and the subject were located in a remote location on the property. Utilizing SCSO helicopter, Henry-1, I was long-lined to the scene located at GPS: [redacted] I arrived at the scene at 1853 hours. The scene was a remote, forested area with a creek running along the side. There were no visible walking trails located to the location.

The subject was located in a supine position on the rocky creek bed. Yellow "Sheriff's Line Do Not Cross" tape surrounded all four side of the location several feet in either direction away from the subject. At approximately 1857 hours, I began my external examination of the subject. The subject appeared to be an adult male, who was clad in blue jeans, a black belt and blue Hanes underwear. The subject had a blue long-sleeved shirt, which had been cut by paramedics during life-saving efforts. The following medical interventions were noted on the subject: four electrocardiogram pads (two on the left and right aspect of his anterior upper shoulders and two on the anterolateral aspect of the subject's pelvis); two automated electronic defibrillator (AED) pads (one on the right anterior aspect of the subject's upper chest and one on the lateral aspect of the subject's left torso); and one air-occlusive dressing over the subject's sternum slightly off center towards the left side. These were all photographed and left in place to be removed by the Coroner Division's Chief Forensic Pathologist during the subject's forensic examination. It is unknown if there was a wound under the air-occlusive dressing as it was kept in place. A possible defect was noted in the shirt; however, it was cut through by paramedics, so I was unable to confirm whether the defect was from a bullet or a previous tear in the clothing. The subject had an open wound to the left lateral aspect of his left arm with dried blood. This wound was not probed so as to preserve it for further examination by the Chief Forensic Pathologist, so it is unclear if this was a graze, or a gunshot wound. Several defects were noted in the subject's clothing above where this wound was located. Dried blood was apparent covering the subject's head. An open wound was noted inside the subject's left ear canal. A small abrasion was noted to the lateral aspect of the subject right upper arm. No petechial hemorrhages were noted in either of the subject's eyes; however, tache noir was present in both of his eyes. Rigor mortis was present in the subject's extremities; however, it broke easily when pressure was applied. Livor mortis was apparent on the subject's back consistent with his supine position. This livor blanched slightly when pressure was applied with quick capillary refill. The subject's mandibular alveolar mucosa had no hemorrhages; however, there was some discoloration along the gumline around the subject's upper front teeth. No hemorrhages were noted along the subject's lower alveolar mucosa. The subject's maxillary and mandibular frenula were present and intact. Fluid was visible inside of the subject's mouth. Upon palpation of the subject's head and chest, no crepitus was appreciated. The subject's abdomen appeared slightly distended and taut. The fingernails on both of the subject's hands were short and appeared relatively clean with no overt signs or evidence of a struggle. Both hands were covered in a fine layer of dirt, which may have been due him being in the creek at one point and then in the dirt around the creek bed. The subject had a small laceration to the dorsal aspect of his right thumb and a small laceration to the dorsal aspect of his middle finger at the nail bed. Some dried [illegible] was noted around the subject's middle fingernail. The bottoms of the subject's feet were fairly dirty consistent with him having been in the creek. Some small lacerations were noted to the base of the subject's right foot. I noted the following monochromatic tattoos on body: three skulls on the lateral portion of his upper left arm; two females on his left lateral torso; a skull image with a sacred heart on the lateral portion of his upper right arm; a script lettering tattoo noted on the right anterior aspect of the subject's chest (unreadable due to the AED pad being in place); a script lettering tattoo noted on the left anterior aspect of the subject's chest (unreadable due to the air-occlusive dressing being in place); large script lettering on the upper portion of the subject's back which read "PELEAZ"; a Dia de los Muertos skeleton on the left portion of his back; and a grim reaper on the right side of his back.

Released by:
Marin County Sheriff's Office
Coroner Division

At 1927 hours, the temperature of the scene was approximately 78.27-degrees Fahrenheit and 66.42%RH humidity as measured using an E-RAY Humidity meter. Using a county-issued EtekCity Lasergrip 774 infrared non-contact thermometer, I measured the subject's torso temperature to be 82.1-degrees Fahrenheit at 1927 hours, and his cranial temperature to be 80.5-degrees Fahrenheit at 1926 hours.

At 1934 hours, I sanitized my the FbF mobileOne QuickDock Mobile Biometric Identification System utilizing an alcohol wipe, and used its accompanying iPhone application, and my county-issued iPhone to obtain two digital images of the subject's right thumbprint. These were e-mailed to my Coroner Division e-mail to be utilized to positively identify the subject.

Due to weather conditions as well as the Henry-1 helicopters practice of not flying past a specified time, the subject was placed in a black body bag and sealed the bag with red lock #: 3594838, at 1942 hours. At 1943 hours, I was long-lined with the subject inside the closed / sealed body bag from the scene to [redacted] Thomas Road where the Coroner Division transport was awaiting.

At 2014 hours, I broke the red lock and opened the body bag. At 2017 hours, utilizing a fresh, never before used Tritech Forensics Porelon Fingerprint Pad, I obtained a full set of inked fingerprints from the subject's left and right fingertips as well as five additional inkprints of the subject's thumb.

As 2025 hours, I placed a new Arrowhead Forensics Hand Preservation bag on the subject's right hand and secured the ties with a knot. As 2025 hours, I placed a new Arrowhead Forensics Hand Preservation bag on the subject's left hand and secured the ties with a knot.

At 2033 hours, I secured the black body bag with two red locks (#: 4338909/3594672), and the subject was placed in the Coroner Division transportation vehicle to be transported to the Coroner Division morgue. At 2128 hours, I began following the transportation vehicle to the Coroner Division morgue located at Monte's Chapel of the Hill funeral home (starting mileage: 47,408 miles). At no point during the transportation process did I lose sight of the transportation vehicle. At 2147 hours, we arrived at the Coroner Division morgue without incident. At 2154 hours, the subject was placed in the walk-in refrigerator to be held there until his forensic examination.

On 8/2/22, at 1100 hours, during the subject's forensic examination, a nasopharyngeal swab was obtained from both of the subject's nares for COVID-19 testing. On 8/3/22, the swab was transported to the Napa-Solano-Sonoma-Marin Public Health Laboratory for testing purposes. On 8/4/22, the test results were received by the Coroner Division, and the subject was reported to have tested negative for COVID-19. A copy of these results was saved to the subject's case file.

SRPD Detective G. Rantissi provided an unedited portion of the body camera footage. This footage was reviewed, sent to the Coroner Division's Chief Forensic Pathologist, and saved to the subject's electronic case file. Detective Rantissi also provided the link to the YouTube.com video the Sonoma County Sheriff's Office uploaded for public consumption, which details the events that occurred during this incident. This video was reviewed, sent to the Coroner Division's Chief Forensic Pathologist, and saved to the subject's electronic case file.

For additional information regarding this incident, please refer to the Santa Rosa Police Department Incident/Investigation report, Report#: SR22-8672. I requested a copy of this report. Upon receipt, the report was reviewed and saved to the subject's case file.

MODE OF DECEDENT IDENTIFICATION:

While on scene, I located a wallet in the subject's front left pocket. Within the wallet was a Mexican Consular Identification Card with the following name on it: [redacted] (Date of birth: [redacted] and an address out of Santa Rosa. The image on the card appeared consistent with the subject; however, due to the circumstances of the case, scientific confirmation of the subject's identification was warranted prior to confirming identification.

On 7/30/22, at 1207 hours, I provided MCSO Deputy Baker with the subject's inked fingerprints, which were taken on scene as described above, and requested he run them through the Automated Fingerprint Identification System (AFIS) utilizing the Universal Latent Workstation (ULW) to see if there were any matches. At 1407 hours, Deputy Baker informed me the subject matched with a David Pelaez CHAVEZ out of Lower Lake, CA in Lake County. I seconded Deputy Baker's confirmation by comparing the fingerprint taken on scene with that provided by AFIS.

Marin County Sheriff - Coroner Division

Report Of Death Worksheet

6	MODE **Homicide**	CASE # **CR2200226**	**Master File**
	STATUS **Post - OC**	DEPUTY **Alexandra Torres**	

PROPERTY & EVIDENCE / RELEASE:

I took digital photos of the scene and the subject's remains. All photos were retained at the Coroner Division.

The following items of personal property were collected and released by the Coroner Division to Santa Rosa Police Department to be retained by their department as evidence: 1 blue shirt; 1 cell phone; 1 vehicle key fob; wallet with contents; 1 Mexican Consular Identification card (#: 124243222 for [redacted].

FUNERAL HOME / TRANSPORT:

CONTROLLED DOCUMENT
Duplication or Reissuance
Forbidden by Law
12/19/2022
Released by
Marin County Sheriff's Office
Coroner Division

On 7/29/22, at 2033 hours, I secured an ID tag around the subject's ankle and placed him in a black body pouch; the pouch was sealed with two red locks #'s: 4338909/3594672. At 2128 hours, I began following the transportation vehicle to the Coroner Division morgue located at Monte's Chapel of the Hill funeral home (starting mileage: 47,408 miles). At no point during the transportation process did I lose sight of the transportation vehicle. At 2147 hours, we arrived at the Coroner Division morgue with no incident. At 2154 hours, the subject was placed in the walk-in refrigerator to be held there until his forensic examination.

NEXT OF KIN CONTACT / SEARCH INVESTIGATION:

On 7/30/22, I spoke with [redacted] Chavez, who confirmed he was the subject's brother. I provided him with the circumstances of the subject's death and my resulting investigation. He acknowledged his understanding and raised no objections or opposition at this time. I provided him with the Coroner Division contact information, case number, and my contact information. I explained the Coroner Division's Chief Forensic Pathologist would be completing a forensic examination, taking biological specimens which, the Coroner Division would retain, and subsequently opining a cause of death. Upon completion of the examination, the subject would be available for release to a mortuary-funeral home of his selection. I encouraged him to move forward with the completion of disposition arrangements and advised him to call me should he have any questions.

CORONER DIVISION

AUTOPSY PROTOCOL

FILE NUMBER: CR22-226

NAME OF DECEDENT: DAVID CHAVEZ

DATE OF AUTOPSY: August 2, 2022

DIAGNOSES:

I. Penetrating gunshot wound to head, with:
   A. Perforations of base of skull and cerebellum.
   B. Basilar skull fractures.
   C. Subarachnoid and subdural hemorrhages.

CONTROLLED DOCUMENT
Duplication or Reissuance
Forbidden by Law
12/19/2022
Released by:
Marin County Sheriff's Office
Coroner Division

II. Penetrating gunshot wound to chest, with:
   A. Perforations of sternum, right lung and right second rib.
   B. Hemothorax, right (250 cc).

III. Graze gunshot wound to left arm.

IV. Small abrasions, torso and extremities.

V. [redacted]

VI. [redacted]

VII. [redacted]

VIII. Acute methamphetamine intoxication (see separate Toxicology Report).

CAUSE OF DEATH: PENETRATING GUNSHOT WOUNDS TO HEAD AND TORSO

OTHER SIGNFICIANT CONDITIONS: ACUTE METHAMPHTEAMINE INTOXICATION

"I hereby certify that I, Joseph I. Cohen, M.D., Chief Forensic Pathologist of Marin County, have performed an autopsy on the body of David Chavez on the 2nd day of August, 2022 commencing at 9:35 a.m. at the Chapel of the Hills Funeral Home in San Anselmo, California."

Marin County Sheriff's Office
Coroner Division

This examination was assisted by Emily Mandel, Jessica Cantwell and Roger Fielding of the Marin County Sheriff's Office, Coroner Division. The examination was attended by members of the Sonoma County District Attorney's Office and Santa Rosa Police Department.

The examination commenced by breaking red body bag seals bearing the numbers 4338909 and 3594672. Upon completion of the examination, a blue seal bearing the number 580090 is affixed to the body bag.

EXTERNAL EXAMINATION:

The body is of a well developed, well nourished man whose appearance is consistent with the given age of 36 years.

The scalp hair is dark, short and scant. There are multiple tattoos on the body. There is patchy skin slippage on the body surfaces. The ocular conjunctivae are free of petechiae, jaundice or hemorrhage. The oral cavity has natural teeth in fair to good condition. There are no injuries to the buccal mucosa. The eyes, ears, nose and mouth are normally developed. The nasal septum is intact. The neck is symmetrical and free of injury. Injuries to the body are described below. The external genitalia are of a normal, non-circumcised, adult man. There is a mustache and beard. The posterior neck, back and buttocks are free of injury. There are no injuries to the perianal area.

There are no apparent scars on the wrists. The fingernails are of short to moderate length with focal accumulations of dirt. Injuries to the hands and right foot are described below. There is no appreciable edema of the extremities. Bags were placed over the hands prior to receipt of the decedent. The bags are removed and discarded. A red identification band encircles the left ankle.

POSTMORTEM CHANGES: The decedent is received unembalmed and generally well preserved with early signs of postmortem putrefaction with skin slippage on the body surfaces. Rigor mortis is absent. Livor mortis is slight to moderate, and the body is cool.

CLOTHING: The decedent, upon receipt, is clad only in denim pants and underpants. There are no upper garments, shoes or socks on the decedent at the time of this examination. The clothing is removed and submitted to the Santa Rosa Police Department.

THERAPEUTIC PROCEDURES: There is a transparent adhesive attached to the left upper chest, covering a gunshot wound defect. Gunshot wound injuries are described below. Heart monitoring pads are on the front of the right shoulder, on the left shoulder, and both sides of the lower abdomen. A defibrillator pad is on the mid left chest.

INJURIES, EXTERNAL AND INTERNAL: There are body surface abrasions of the torso and extremities. A superficial, approximate 4 inch long by 1/16 to 1/4 inch wide curvilinear abrasion is on the left lower quadrant of the abdomen. Small, approximate 1/8 inch superficial abrasions

Released by:
Marin County Sheriff's Office
Coroner Division

are on the right knee and proximal right shin. A 1/8 inch abrasion is on the medial aspect of the right foot. There are a couple of approximate 1/8 inch superficial defects on the plantar surface of the right foot. Several minute superficial abrasions are on the dorsum of the left middle and little fingers. Several approximate 1/8 inch superficial abrasions are on the dorsum of the right hand. A slender 1/4 to 3/8 inch linear defect is on the base of the right thumb.

There are three gunshot wounds to the body, including a penetrating gunshot wound to the head, a penetrating gunshot wound to the chest and a graze gunshot wound to the left arm.

PENETRATING GUNSHOT WOUND TO HEAD

There is a penetrating gunshot wound to the left side of the head consisting of a 3/16 inch circular defect containing a 1/8 inch margin of abrasion adjacent to the left ear canal, 6 inches below the top of the head and 3 1/4 inch to the left of midline. There is no apparent fouling or stippling of the adjacent skin. After perforating the skin, the projectile perforated the left ear canal and entered the base of the cranial cavity at the anterior aspect of the left occipital bone. The projectile then perforated the base of the cerebellum prior to exiting the posterior fossa at the base of the right occipital bone. There is bilateral subdural and subarachnoid hemorrhage at the base of the brain and brainstem.

A deformed, medium to large caliber, jacketed projectile is removed from the subcutaneous tissue of the right suboccipital scalp adjacent to the lateral aspect of the right side of the neck. The projectile, along with a small fragment recovered from the posterior fossa, are submitted to the Santa Rosa Police Department.

The direction of travel of the projectile is left to right and slightly front to back.

PENETRATING GUNSHOT WOUND TO CHEST

There is a penetrating gunshot wound to the left upper aspect of the chest consisting of a 1 3/4 inch oval defect containing a margin of abrasion on the left (lateral) aspect of the defect. The entrance wound is 12 inches below the top of the head and 1 inch to the left of midline. There is no fouling or stippling of the adjacent skin.

After perforating the skin of the chest, the projectile perforated and caused a large defect on the right edge of the manubrium of the sternum, then perforated the upper lobe of the right lung (graze wound of the lung) and the right second rib. There is marked soft tissue hemorrhage associated with the gunshot wound.

A deformed, medium to large caliber, jacketed projectile is removed from the deep soft tissue of the right anterior axillary region and is submitted to the Santa Rosa Police Department.

The direction of travel of the projectile is left to right and slightly front to back.

GRAZE GUNSHOT WOUND TO LEFT ARM

There is a graze gunshot wound to the anterolateral aspect of the distal left arm consisting of a 1 3/4 inch soft tissue defect containing a 3/16 inch margin of abrasion at the lateral aspect of the defect.

The direction of travel of the projectile is left to right and slightly upward based on the normal anatomic position as a reference.

COMMENT: The graze gunshot wound to the left arm may be associated with the penetrating gunshot wound to the left chest (i.e., consistent with the same projectile grazing the left arm then entering the left upper chest).

INTERNAL EXAMINATION:

CONTROLLED DOCUMENT
Duplication or Reissuance
Forbidden by Law
12/16/2022
Released by:
Marin County Sheriff's Office
Coroner Division

BODY CAVITIES: The organs are in their usual situs. Approximately 250 cc of blood are in the right pleural cavity. The right lung is slightly atelectatic. There are no pericardial, left pleural or peritoneal liquid accumulations. The surfaces are smooth and glistening.

HEAD: Injuries to the head were described above. The uninjured portions of the 1320 gram brain have normal appearing gyri and sulci. The leptomeninges are smooth, delicate and transparent, and the leptomeningeal vessels are normal. The arteries at the base of the brain are free of atherosclerosis. The cranial nerves have normal distributions. The surfaces of the brainstem and cerebellum are unremarkable, except where noted previously.

The cortical gray matter, subcortical and deep white matter, deep gray nuclei and ventricles are normal. The cerebrospinal fluid is clear. Horizontal sections of the brainstem and cerebellum are unremarkable, except for the gunshot wound injury to the base of the cerebellum noted above.

NECK: The cervical vertebrae, hyoid, tracheal and laryngeal cartilages and paratracheal soft tissues are normal. The upper airway is not obstructed. The tongue is unremarkable.

CARDIOVASCULAR SYSTEM: The aorta and branches show fatty streaks only, without appreciable atherosclerotic change. The vena cavae and pulmonary arteries have no thrombus or embolus.

The moderately to markedly dilated 370 gm heart has a normal distribution of right dominant coronary arteries. The epicardial vessels show less than 10 to 20% multifocal narrowing except for a small, approximate 1 millimeter diameter left anterior descending artery that shows 100% occlusion by soft plaque on the proximal aspect of the artery. The myocardium is uniformly red-brown without hemorrhage, softening or pallor. The left ventricle wall thickness measures 1.0 cm. The endocardial surfaces, heart valves, chordae tendineae and papillary muscles are normal.

RESPIRATORY SYSTEM: The right lung weighs 550 gm, and the left lung, 470 gm. The left lung is well inflated; the right lung is slightly atelectatic. A graze gunshot wound to the upper lobe of the right lung was mentioned above. There is contusional injury to the upper lobe of the right

lung associated with the gunshot wound. The remaining lung segments are soft and spongy without consolidation. The bronchi are not obstructed. The vessels have no thrombus or embolus.

LIVER, GALLBLADDER, PANCREAS: The 1840 gm liver has a smooth, intact capsule. The parenchyma is slightly and diffusely yellow consistent with slight steatosis of the liver. The bile ducts are unremarkable. The gallbladder contains only several drops of dark green viscid bile without stones. The pancreas is uniformly tan-gray and has a normal lobular appearance.

HEMIC AND LYMPHATIC SYSTEMS: The 80 gm spleen has a smooth, intact capsule. The parenchyma is plum colored and moist with distinct follicles. There are no lymph node enlargements. The thymus is atrophic. The bone marrow of the ribs and clavicles is unremarkable.

GENITOURINARY SYSTEM: The right kidney weighs 140 grams, and the left kidney, 120 grams. The cortices are slightly finely granular. The parenchyma is red and wet with demarcated corticomedullary junctions. The vessels are free of significant atherosclerosis. The calyces and pelves are empty, opening into ureters which maintain uniform caliber and open into an unremarkable urinary bladder containing approximately 2 cc of cloudy urine.

Marin County Sheriff's Office
Coroner Division

The prostate is symmetrical with uniformly tan-gray cut surfaces. The testes appear small and free of injury.

ENDOCRINE SYSTEM: The pituitary, in situ, is unremarkable. The thyroid is symmetrical with uniform, dark red, glandular appearing cut surfaces. The adrenals are unremarkable, containing maroon medullae covered by thin, golden yellow cortices.

DIGESTIVE SYSTEM: The esophagus is unremarkable. The stomach contains approximately 100 cc of light beige liquid admixed with slight quantities of small particulates. The small and large intestines, and appendix are unremarkable.

MUSCULOSKELETAL SYSTEM: The musculature is well developed and normally distributed. Fractures of the skeleton were noted above.

The following specimens are retained for possible toxicological evaluation: Iliac blood, blood from the right chest cavity (multiple) and vitreous. A gray top tube containing chest blood is submitted to the Santa Rosa Police Department.

Routine tissue samples are collected and placed in formalin.

Blood is retained in separate red and purple top tubes (two purple tops). One purple top blood sample is submitted to the Santa Rosa Police Department, and separate red and purple top tubes are retained at the Marin County Sheriff's Office, Coroner Division.

Radiographs are obtained prior to the examination.

Photographs are obtained by Chief Deputy Coroner Roger Fielding and by law enforcement.

Blood droplets are placed on two separate Whatman cards; one card is submitted to the Santa Rosa Police Department and one card is retained.

Clothing and ballistic evidence is submitted to the Santa Rosa Police Department.

Other than the above findings, examination of the specimen(s) submitted did not reveal any positive findings of toxicological significance by procedures outlined in the accompanying Analysis Summary.

Reference Comments:

1. Amphetamine - Iliac Blood, Chest Cavity Blood:

   Amphetamine (Adderall, Dexedrine) is a central nervous system stimulant. Amphetamine is also a metabolite of methamphetamine, benzphetamine and selegiline. It is used therapeutically in the treatment of narcolepsy and obesity and also in the treatment of attention-deficit hyperactivity disorder (ADHD). Amphetamine has a high potential for abuse. At low doses, amphetamine causes mild stimulation, offset of fatigue, and increase in alertness. It also causes changes in attitude, judgment and impulsivity. At higher doses, amphetamine causes euphoria, excitation, agitation, hypervigilance, rapid speech, dilated pupils which react slowly to light and increased motor restlessness. Pulse and blood pressure may be elevated. Withdrawal from amphetamine following abuse can result in extreme fatigue and uncontrollable sleepiness, agitation, and depression. In the treatment of narcolepsy, amphetamine is administered in daily divided doses of 5 to 60 mg. In abuse doses of several grams may be used on a daily basis in 'runs' lasting a week or more.

   Following a single oral dose of 10 mg amphetamine sulfate, a reported peak blood concentration of 40 ng/mL was reached at 2 hr. Following a single 30 mg dose to adults, an average peak plasma level of 100 ng/mL was reported at 2.5 hr. A steady-state blood level of 2000-3000 ng/mL was reported in an addict who consumed approximately 1000 mg daily.

   Overdose with amphetamine can produce restlessness, hyperthermia, convulsions, hallucinations, respiratory and/or cardiac failure. Reported blood concentrations in amphetamine-related fatalities ranged from 500-41000 ng/mL (mean 9000 ng/mL).

Reference Comments:

2. Ethanol (Ethyl Alcohol) - Iliac Blood, Chest Cavity Blood:

   Ethyl alcohol (ethanol, drinking alcohol) is a central nervous system depressant and can cause effects such as impaired judgment, reduced alertness and impaired muscular coordination. Ethanol can also be a product of decomposition or degradation of biological samples.

3. Methamphetamine - Chest Cavity Blood:

   d-Methamphetamine is a DEA schedule II stimulant drug capable of causing hallucinations, aggressive behavior and irrational reactions. Chemically, there are two forms (isomers) of methamphetamine: l- and d-methamphetamine. The l-isomer is used in non-prescription inhalers as a decongestant and has weak CNS-stimulatory activity. The d-isomer has been used therapeutically as an anorexigenic agent in the treatment of obesity and has potent CNS-, cardiac and circulatory-stimulatory activity. Amphetamine and norephedrine (phenylpropanolamine) are metabolites of methamphetamine. d-Methamphetamine is an abused substance because of its stimulatory effects and is also addictive.

   CONTROLLED DOCUMENT
Duplication or Reissuance
Prohibited by Law
12/19/2022
Released by:
Marin County Sheriff's Office
Coroner Division

   A peak blood concentration of methamphetamine of 20 ng/mL was reported at 2.5 hr after an oral dosage of 12.5 mg. Blood levels of 200-600 ng/mL have been reported in methamphetamine abusers who exhibited violent and irrational behavior. High doses of methamphetamine can also elicit restlessness, confusion, hallucinations, circulatory collapse and convulsions.

   *In this case, the level of methamphetamine determined has not been differentiated according to its isomeric forms. Differentiation of the isomers of methamphetamine is available upon request.

Unless alternate arrangements are made by you, the remainder of the submitted specimens will be discarded two (2) years from the date of this report; and generated data will be discarded five (5) years from the date the analyses were performed.

ICD-10-CM DX:

TEST REQUESTED	RESULTS	UNITS	NORMAL RANGE
COVID-19 RNA Screening			
Coroner Specimen frozen on DOC (8/2/22) @ 11:15AM			
	Assigned for SC2 only: CDC FluSC2 Multiplex PCR		
SC2 PCR: CDC Influenza SARS-CoV-2			
SARS-CoV-2 (CDC FluSC2)	NEGATIVE: 2019 novel coronavirus (SARS-CoV-2) RNA not detected by rRT-PCR.		Negative
	EUA: The CDC Influenza SARS-CoV-2 (Flu SC2) Multiplex RT-PCR Assay is only for use under the Food and Drug Administration's Emergency Use Authorization (EUA). Testing is limited to laboratories certified under the Clinical Laboratory Improvement Amendments of 1988 (CLIA), 42 U.S.C. § 263a, that meet requirements to perform high complexity tests, including real-time RT-PCR assays. Positive results are indicative of active infection but do not rule out bacterial infection or co-infection with other viruses; clinical correlation with patient history and other diagnostic information is necessary to determine patient infection status. The agent detected may not be the definite cause of disease. Negative results do not preclude SARS-CoV-2, influenza A, and/or influenza B infection and should not be used as the sole basis for diagnosis, treatment or other patient management decisions. Negative results must be combined with clinical observations, patient history, and/or epidemiological information. Negative results obtained from individuals who are not exhibiting clinical signs and symptoms associated with respiratory viral infection at the time of specimen collections should be interpreted with particular caution. Negative results in asymptomatic individuals cannot be used as definitive evidence that an individual has not been exposed to SARS-CoV-2 or influenza viruses and has not been infected with any of these viruses.

Amended Death Certificate (Cause of Death) Form

☑ Certification of a pending case ☐ Recertification of a case

Today's Date 12-11-22 File number CR22-226

Decedent CHAVEZ, David (SONOMA COUNTY) Date of death 07-29-22

CONTROLLED DOCUMENT
Duplication or Reissuance Forbidden by Law
12/19/2022
Released by: COHEN
Marin County Sheriff's Office
Coroner Division

■ Autopsy ☐ External ☐ File Review

The CAUSE of DEATH is hereby amended by COHEN to the following:

(A) Penetrating Gunshot Wounds to Head and Chest Int Mins

(B) Int

(C) Int

(D) Int

Other significant conditions Acute Methamphetamine Intoxication

Comments:

*** Postmortem alcohol level is insignificant (some or all is consistent with early putrefaction)
*** Graze GSW to left arm may be associated with the GSW to chest (e.g., bullet may have first grazed left arm then entered the chest)
*** MOD to be discussed

Signature/Acknowledgement:

AUTOPSY VIEWING RELEASE

DECEDENT'S NAME: CHAVEZ, David **CORONER CASE NUMBER:** CR22-226

I, **(PRINT NAME)** Shannon BRADLY, request permission to observe an autopsy conducted in the course of official business by the Marin County Sheriff's Office Coroner Division as part of my police officer/detective duties, formal education, and/or training. I do hereby for myself, my heirs, executors and administrators remise, release and forever discharge the County of Marin; the Marin County Sheriff's Office; the Coroner Division; the employees and agents of each of the foregoing, acting officially or otherwise, from any and all claims, demands, actions or injury to the applicant which may occur by reason of this activity.

CONTROLLED DOCUMENT

Released by:
Marin County Sheriff's Office
Coroner Division

I understand that the observations of such autopsy may expose me to biohazardous substances such as blood and other body fluids. I further acknowledge that autopsies by their very nature are graphic and are potentially disturbing to some viewers, and that the decedent being observed may have died due to an act of violence such as, but not limited to, gunshot, stabbing, beating or strangulation. I also acknowledge that the bodies of other deceased individuals may be present whose death may have been caused by disease, motor vehicle accident, suicide or natural caused death.

I understand that what I observe and **all information** that I may obtain during my visit is confidential and is not to be disclosed, except in the course of official police duties or with prior written approval of the Coroner or his/her designee. I further understand that I am required by policy and law to comply with all directions given to me by the staff members of the Coroner Division and that my "Permission to Attend" may be canceled at anytime by the Coroner or his/her designee. I also understand that the taking of photographs or recordings of any kind are not allowed except in the course of official police duties.

I UNDERSTAND THAT DURING THE AUTOPSY I MUST WEAR ALL OF THE PROTECTIVE CLOTHING AND OTHER EQUIPMENT THAT IS ISSUED TO ME BY THE CORONER DIVISION STAFF.

Please initial here that your have read and understand that the wearing of protective clothing is required: _____

I hereby certify that I am over the age of 18 years and that to the best of my knowledge I am of sound health.

Signature: Shannon Bradly Date: 8/2/22.

The purpose of my viewing an autopsy is: (Check one)
