CELL DATA RECORDS REPORT:

On August 02, 2022, I authored a search warrant seeking cell data records related to David Pelaez. I was able to obtain Pelaez's phone number through the SIM card found in his phone and through Pelaez's girlfriend. The search warrant was signed by the Honorable Judge T. Shaffer of the Sonoma County Superior Court on 08/03/22 and served to AT&T on the same day.

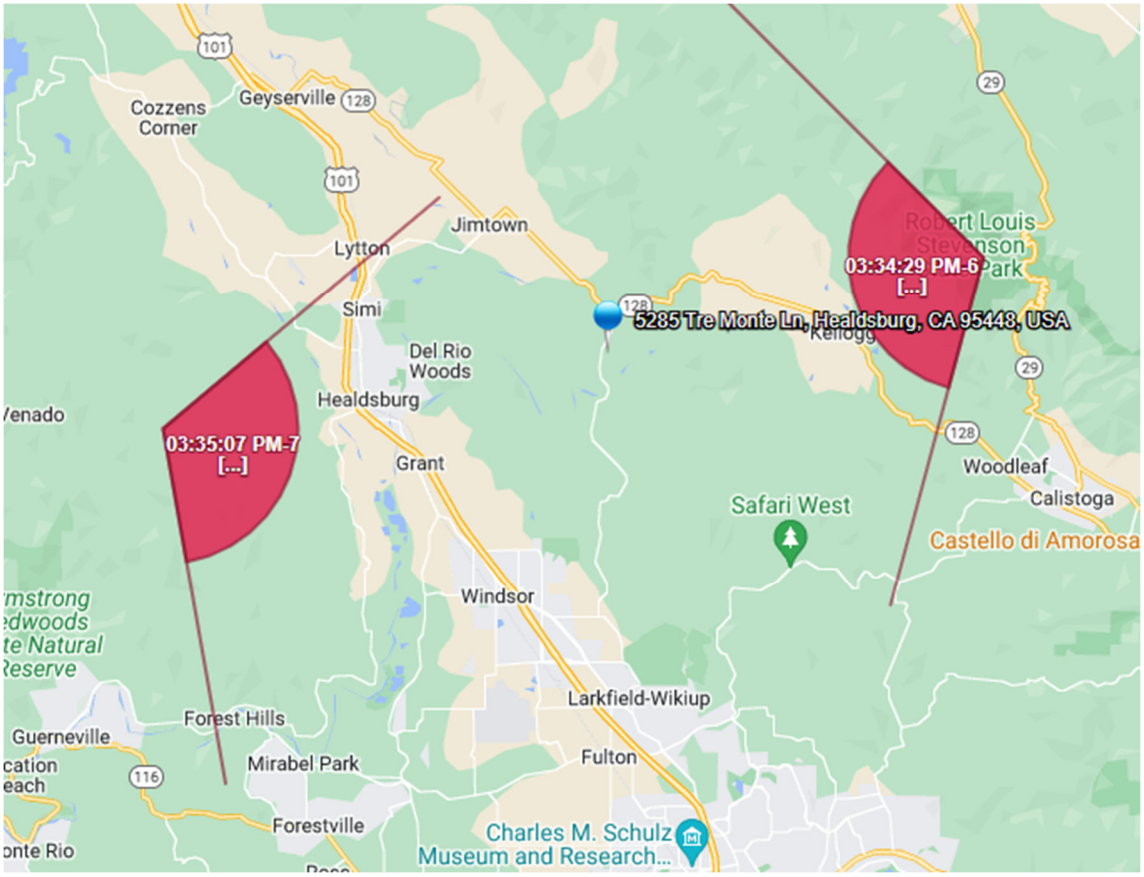
During the week of 08/09/22, I received a response from AT&T which included the cell data records. In addition to cell data records, AT&T included NELOS (Network Event Location System) records. Based on my training and experience, I know that NELOS records are Enhanced Location Records which indicate the approximate location of a cellular device. NELOS records are proprietary to AT&T and determine these locations based on algorithms. For further clarification, Pelaez's phone was using the Cricket cellular network and Cricket is a subsidiary of AT&T.

My intention of reviewing these records was to determine if Pelaez had traveled to or frequented the area of Tre Monte Lane before the incidents on 07/29/22. I also sought to best estimate Pelaez's whereabouts prior to the incidents on Tre Monte Lane.

I began by conducting a general overview of the usage data records in order to determine if and when Pelaez connected to cell towers in the area near Tre Monte Lane. I reviewed usage data records from 06/29/22 to 07/27/22 and did not see any indication that Pelaez connected to any cell towers in that area.

I conducted a more in-depth look of the usage data records starting on 07/28/22. I saw that most of the phone usage indicated that Pelaez was near his home in Lake County from midnight until around 2:45 PM. At that time, Pelaez appears to travel through Lake County into Sonoma County most likely via Highway 128.

At approximately 3:34 PM, I noted Pelaez's cell phone connects to two cell towers which encompass the general area of Tre Monte Lane and remained in that general area for a short period of time. I believe that this was an indication Pelaez was driving through the area but did not necessarily stop. A map containing the data usage records is included on the next page.

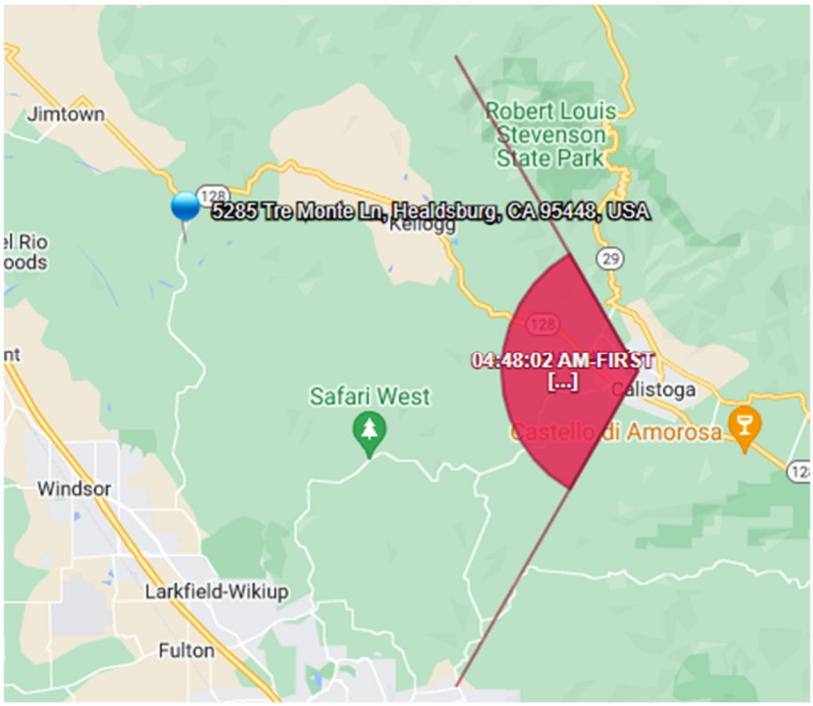


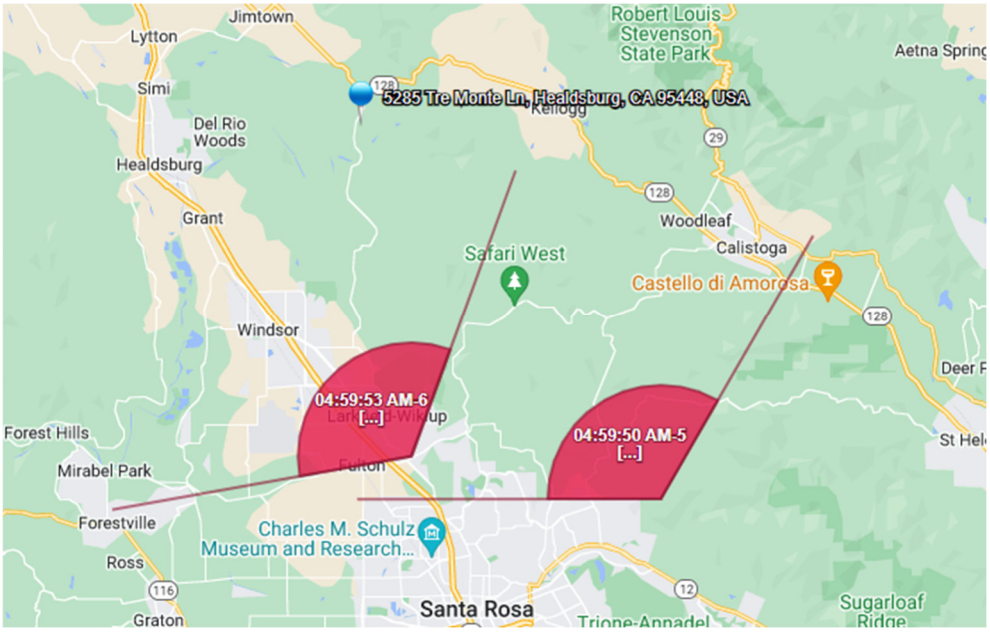
Pelaez then enters Sonoma County and connects to cell towers in the Cloverdale area. At approximately 5:30 PM, Pelaez's cell data records indicate that he travels through Sonoma County and back into Lake County likely via Highway 128. Pelaez then begins to connect to several cell towers in the northern Napa County area before arriving back in Lake County at around 08:30 PM. Pelaez's phone continues to connect to cell towers near his home throughout the night.

On 07/29/22, starting at around 02:25 AM, Pelaez's phone begins to show activity indicating that he is traveling away from his home. This was consistent with Pelaez's girlfriend's statement indicating that they were involved in an argument and Pelaez left that home sometime during the night.

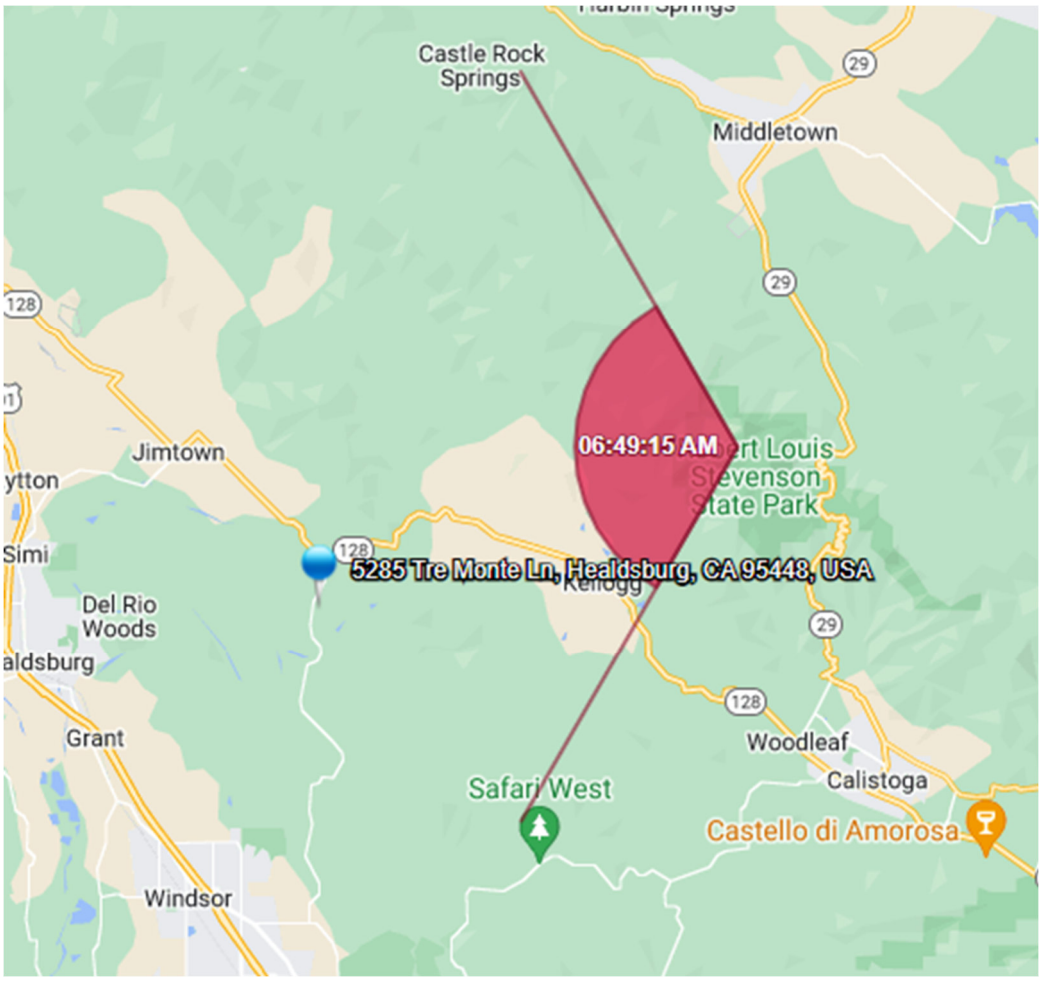
Starting at approximately 2:50 AM, Pelaez's phone begins to connect to several cell towers located in the Robert Luis Stevenson State Park and the City of Calistoga. Pelaez continues to bounce off numerous towers in this area until approximately 4:48 AM. At that time, Pelaez's

phone begins to show more consistent activity in the area encompassing Tre Monte Lane. Two maps containing the data usage records are below.





Pelaez's phone continues to connect to numerous cell towers in the area of Robert Louis Stevenson State Park until the last data usage record was provided at 06:49 AM. There was no other location data available after that time.



As a disclaimer, it should be noted that usage data records simply indicate which cell tower a cellular device connected to, and which directional antenna was used. Based on the fact that Tre Monte Lane is located in a rural area where cell towers are not commonplace and cellular reception could be minimized, I believe that it was likely that Pelaez was in the general area illustrated on the maps. This type of cellular technology cannot indicate Pelaez's precise location; however, based on the totality of the investigation, I believe that Pelaez is in the general

vicinity east of Tre Monte Lane starting in the early morning hours of 07/29/22. I also searched open-source cell tower maps and believe there are no additional cell towers in closer proximity to Tre Monte Lane which could potentially provide a better description of Pelaez's whereabouts.

Aside from reviewing Pelaez's cell location data, I also reviewed his call and text logs to see who he was communicating with. The records I obtained from AT&T did not include any text message content.

I attached the call and text log from 07/29/22 below. In this call log, I located both [redacted] and [redacted] phone numbers.

Time	Call Duration	Type	Direction	Calling Number	Called Number
12:08:00 AM		Text	Outgoing	Pelaez	[redacted]
12:08:22 AM		Text	Outgoing	Pelaez	[redacted]

08:14:37 PM	0:00	Voice	Incoming	[redacted]	Pelaez
08:14:39 PM	0:05	Voice	Incoming	[redacted]	Pelaez

This ended my review of the cell data records. Please review the entirety of the documents returned from AT&T for further information.

In addition to reviewing the call data records obtained through AT&T, I attempted to search through Pelaez's phone which was found in his pocket at the time he was searched. Due to apparent damage, I was unable to power the phone on.

DISPSITION: Attach to report.
