Agency: **Santa Rosa Police Department** Case #: **SR220008672.015**

CONTROLLED DOCUMENT - DO NOT DUPLICATE

Narrative

VEHICLE PROCESSING CA[redacted]
Written by: **Fix, Allisha 1068916**
Date/Time: **08/23/2022 19:37:00**

SUPPLEMENT:

On 7/29/22 I was the oncall FET. At approximately 2245 hours VCI Sergeant Matthies contacted me at home and asked me to return to work at 0900 hours on 7/30/22 to process a vehicle for evidence.

On 7/30/22 I returned to work and met with Matthies and VCI Detective Andrews. They advised me that on 7/29/22 a Nissan Sentra related to the SCSO critical incident had been towed to Yarbrough Tow. They believed the car had been driven by David Pelaez prior to his involvement in the SCSO critical incident. I was asked to process the vehicle for evidence.

On 7/29/22 I had collected a Nissan key fob from the pocket of Pelaez and had placed it in a secure Evidence Drying Cabinet. On 7/30/22 I removed the key fob from the Evidence Drying Cabinet.

I proceeded to Yarbrough Tow, located at 3680 Santa Rosa Avenue, and signed into their log at 1003 hours. The vehicle was a silver, Nissan Sentra 4D SD, CA/[redacted]. I observed the left front driver's window was rolled about ¾ of the way down.

I took overall photographs of the exterior of the car. Using the key fob I collected from Pelaez, I attempted to open the trunk of the car with positive results. I then photographed the contents of the trunk. There was a large black garbage bag on top blocking most of the trunk contents. I moved it to the side and took additional photographs of the trunk contents which consisted of various bags and clothing.

Using a single use brush and single use powder to preserve DNA, I dusted the exterior left front driver's door area for prints with positive results. I lifted prints from the exterior left front door frame and the exterior left front driver's window. I then collected a DNA swab from the exterior left front door handle.

I then photographed the interior of the vehicle. I observed a blue sleeping bag in the right front passenger seat. After photographing the sleeping bag in place, I removed it and took additional photographs of the right front seat area. I located a white paper on the right front floorboard which was a pay stub for "[redacted]" from Patterson Taber Engineering Inc. dated 7/29/22 (see attachment "pay stub").

Using a single use brush and single use powder, I dusted the interior left front driver's area for prints with negative results. I then collected DNA swabs from the interior left front door handle and the gear shift button.

Andrews arrived at my location and searched the car. He went through the contents of the trunk which mainly consisted of women's, men's, and boy's clothing. He searched through a white purse with a spider design and located a money transfer receipt dated 5/24/22. The sender, David Pelaez Chavez [redacted], sent $120 to [redacted] in Cabo San Lucas Mexico (see attachment "money transfer").

I collected the following items from the vehicle (CA[redacted]):

-DNA swab from exterior left front door handle (item 15)

-DNA swab from interior left front door handle (item 16)

-DNA swab from gear shift button (item 17)

-pay stub for [redacted] dated 7/29/22 (item 18, see attachment "paystub"), collected from right front floorboard

-money transfer receipt from David Pelaez Chavez to [redacted] (item 19, see attachment "money

transfer"), collected from white purse in trunk

-two latent print cards from the exterior driver's door frame and window (item 20)

Andrews filled out a search warrant inventory list and left a copy in the vehicle. When we were done, I signed out of Yarbrough Tow's log at 1107 hours. I returned to SRPD where I booked items 15-20 into SRPD Property and Evidence using SAFE Tracker. I also imported my photographs into Evidence.com and labeled them "CA/[redacted]."

DISPOSITION:

Attach to original report.
