Date/Time: **10/06/2022 11:37:00**

SUPPLEMENT:

On 08-17-22, while working in the Identification Bureau, I checked out Item 56 from the Property and Evidence Section. Item 56 contained one latent fingerprint card related to an Officer Involved Incident investigation, which was booked by FET Brady on 08-10-22. I also received a Work ID Request from FET Brady requesting an examination of photographs of latent impressions related to Item 56. The Work ID Request noted a known suspect of David Pelaez Chavez.

I evaluated the latent impressions from the print card contained in Item 56. I determined one was of sufficient quality for submission into the Cogent Automated Biometric Identification System (CABIS) for a cold search for a possible match. I encoded features present in the latent print, which I labeled impression A on Card 1. I then submitted it into CABIS for a search in their database.

No matching candidates were generated for latent impression A, Card 1.

I then entered latent impression A, Card 1, into the FBI Latent Fingerprint Image Searches (LFIS) database for a cold search for a possible match.

No matching candidates were generated for latent impression A, Card 1.

I then examined photographs of the latent impression contained in Item 56 through Evidence.com. I determined the photographs displayed less quality and quantity of friction ridge detail, as compared to the latent fingerprint card lift in Item 56. The photographs were not suitable for comparison purposes.

I then completed a manual comparison of impression A, Card 1, to known suspect Chavez. I determined Chavez was not the source of impression A, Card 1.

On 10-06-22, FET Fix verified my elimination.

I returned Item 56 to SRPD Property and Evidence Section.
